Shorepower Awarded Millions for Transportation Infrastructure

50 sites targeted for Electrified Parking Spaces to save fuel and emissions

Portland, OR. August 5, 2009 –Shorepower Technologies and partner Cascade Sierra Solutions have been awarded a \$22.2M grant from the U.S. Department of Energy for deployment of truck stop electrification (TSE) infrastructure at 50 sites along major U.S. Interstate corridors including I-5, I-80 and I-95. This award will significantly expand Shorepower's network of Electrified Parking Spaces and be a major step in improving the nation's air quality while saving millions of gallons of diesel fuel. The award will also provide for truck modifications to take advantage of the electrified parking spaces.

"We have reached a major milestone in the history of Shorepower. Our expansion will benefit everyone involved, from the truck driver to the family stopping at the travel centers who can breathe cleaner air," said Jeff Kim, President of Shorepower.

The grant will enable long-haul trucks to plug into electric pedestals and allow them to shut down their engines during required rest periods. The benefits include saving the industry millions of gallons of fuel and reducing operational costs, creating a revenue stream for the truck stops, and improving local air quality.

About Shorepower Technologies. Shorepower is a clean-technology infrastructure company offering simple, cost-effective solutions for connecting cars and trucks to the electrical grid including Truck Stop Electrification (TSE) and charging stations for Electric Vehicles (EVs) and Plug-in Hybrid Electric Vehicles (PHEVs). Shorepower corporate facilities are located in Utica, New York, with additional satellite offices in the Portland, Oregon and Washington D.C metropolitan areas.
