

Electric standby infrastructure, simplified.

With turnkey electric infrastructure from Shorepower, reefer owners can now take full advantage of grid-based power at warehouses and distribution centers. From complete system design through installation and maintenance, one low monthly payment covers it all.

Best of breed solutions

Shorepower, a national leader in Truck Stop Electrification, brings the very best partners together to deliver a complete turnkey solution for reefers with electric standby. With EC Company leading design and construction, and Graybar offering competitive financing, this program offers convenience and confidence to current and future eTRU owners.

Return on Investment

Simply put, operating reefers on electric standby saves big dollars over traditional diesel TRUs - 40% to 70% at today's fuel prices. With the Shorepower package, infrastructure investment can pay for itself immediately, without any upfront capital outlay. If you own reefers with electric standby or are considering a purchase, this is your chance to maximize your investment.

Safety and trust

Shorepower's turnkey package brings decades of real world experience with the latest safety technology to protect drivers and equipment. We understand the nuances of power distribution and wiring, and create a higher standard for plug-in infrastructure.
